EXPERIENCE:

VectorStack – Flutter Developer (AI-Integrated Applications)

July 2025 - Present

- Contributed to a high-scale production app (**100K+ users**) by developing and optimizing user-facing features and backend integrations.
- Integrated AI-driven functionalities** including personalized content systems, recommendation logic, and conversational AI (Guru Chat), enhancing user engagement.
- Worked on **data-driven modules** such as Astro, Panchang, and Rashmi systems, focusing on structured data handling and dynamic content delivery.
- Designed and implemented subscription-based feature access (Free, Silver, Gold), improving retention and monetization strategies.
- Refactored legacy components, reducing **bugs by 40%** and improving **performance** and **scalability**.

Continuum Media - Data Analyst/Ai Intern (Hollywood movie making Company)

Dec - Jun 2024

- Collaborated on business intelligence projects with continuum media, where I built an interactive Power BI dashboard to track global sales, financial KPIs, and supply chain metrics, significantly improving data-driven decision-making.
- Utilized SQL for data extraction and DAX Studio for performance tuning; optimized reports and delivered actionable insights that supported revenue forecasting and reduced operational inefficiencies

PROJECTS:

AI Credit Card Fraud Detection Platform - [Python | Scikit-learn | Flask | PostgreSQL | Docker | Flutter | Render | Netlify]

[GitHub Repo](#) [Live Demo](#)

- Built and deployed an end-to-end AI fraud detection platform using **30 transaction features, Random Forest, Flask, PostgreSQL, Docker, and Flutter** for real-time risk prediction
- Engineered ML pipeline on **284K+ transactions** with **RobustScaler** and **SMOTE**, and developed **8+ REST APIs** for auth, prediction, history, alerts, and dashboard analytics
- Deployed **backend** on **Render**, **PostgreSQL** database on **Render**, and **Flutter** frontend on **Netlify**, creating a live full-stack ML application for fraud monitoring

Adaptive AI Recommender System - [Python | Scikit-learn | Streamlit | Pandas | Numpy]

[GitHub Repo](#) [Live Demo](#)

- Built and deployed three recommendation models (**Popularity-Based, Content-Based TF-IDF, and Hybrid**) handling 100,000+ Amazon products with sub-second response time
- Engineered text features using **TF-IDF vectorization** and **cosine similarity**, achieving relevant product similarity scores averaging **70-85%**
- Developed hybrid weighting system combining content similarity (**70%**) and popularity signals (**30%**), outperforming individual models by **15-20%** in **recommendation relevance**
- Deployed production-ready web application using Streamlit with **3 model selectors**, real-time search, and adjustable weight sliders, achieving **100+** daily test inferences

Breast Tumor Prediction - [Python | Scikit-learn | Flask | Html | Pandas | Numpy]

[GitHub Repo](#)

- Built and tested models (**Logistic Regression, Decision Tree, and Random Forest**), with the **Random Forest** Classifier achieving a top **training accuracy of 99.78%** and a **testing accuracy of 97.37%**.
- Evaluated model performance using **confusion matrices** and **classification reports**, confirming the Random Forest model's robust accuracy and balanced precision.
- Created a **web application with four pages** for users to input cell attributes and get real-time predictions on tumor malignancy using the integrated Random Forest model.

SKILLS SUMMARY:

- Languages:** Python, SQL, Dart,
- ML/DL/NLP:** Regression, Classification, Clustering, Random Forest, XGBoost, SMOTE, Model Evaluation, ANN, CNN, TensorFlow, Keras, TF-IDF, Cosine Similarity
- Data Tools:** Pandas, NumPy, Matplotlib, Seaborn, Scikit-learn
- Backend & Databases:** Flask, REST APIs, PostgreSQL, SQLite, Firebase, Authentication
- Frontend & Deployment:** Flutter, Flutter Web, Docker, Docker Compose, Render, Netlify
- Version Control:** Git, GitHub

Education:

B.E in Information Science and Engineering — AMC Engineering College (VTU) — CGPA: 7.92 2020 – 2024
